Click to Upload

Submit to SCM

Main Flow: Engineering Design Upload, Approval and SCM Submission

Step 1: User opens the Engineering Design Dashboard from sidebar menu. System displays KPI cards including Projects Received, Pending Design, In Progress, Revision Required, Ready for Final Submission, Pending Review and Approved. System also displays the project list grid with Search, Filters, Notes, Pagination and 3-dot Actions.

Step 2: User clicks **3-dot Action** on required project.

3-dot actions: Start Design / Continue Design / Review Design/ View Design Details

User selects **Start Design**.

System opens **Drawing Upload** screen and System displays:

1. **Project Information** including Project ID, Client Name, Agreement Number, Site Location, Capacity, Land Area, Survey Request ID, Topography Survey Report ID and Soil Survey Report ID.
2. **Design Package Details** including Design Package ID, Design Status, Design Engineer and Completion Progress (%).

Uploaded Design Documents grid including Document Type, File Name, Drawing Number, Uploaded On, Uploaded By, File Size, Description and Action.

3. **Remarks** including Remarks text box.

Step 3: User clicks **Upload Design Document**. System opens the **Upload Document** modal. User selects the Document Type, enters the File Name, uploads the document and enters the Description if required. System automatically generates the Drawing Number based on the selected Document Type and Design Package. User clicks **Upload**. System validates all mandatory fields and the uploaded file format. If validation is successful, the system uploads the document, displays the message "**Design document uploaded successfully.**" and adds the document to the **Uploaded Design Documents** grid.

Step 4: User can click **3-dot Action** against any uploaded document.

3-dot actions: View Document / Download Document and Delete Document (*only before final submission*)

Step 5: User enters the required remarks in the **Remarks** section. System stores the remarks with the current user information and timestamp.

Step 6: User clicks either **Save for Approval** or **Submit for Final Approval**.

If the user clicks **Save for Approval**, the system saves the current progress as Draft and allows the user to continue later. This option is available until the completion percentage reaches 100%.

If the user clicks **Submit for Final Approval**, the system verifies that the completion percentage is 100% and all mandatory design documents have been uploaded. Upon

successful validation, the system submits the Design Package for approval and updates the Design Status to **Pending Review**.

Step 7: Approver clicks the **3-dot Action** against the required project on the **Engineering Design Dashboard**.

3-dot Actions: Review Design / View Details

Approver selects **Review Design**.

System opens the **Design Approval** screen and displays:

1. **Project & Design Summary** including Project Information, Design Package Information and Completion Progress.
2. **Uploaded Design Deliverables** including Document Type, Document Name, Version, Uploaded On, Uploaded By, File Size, Documents and Remarks.
3. **Approval Details** including Submitted By and Approver Comments.

Step 8: Approver reviews the uploaded design documents by clicking the **View** button against each document. After reviewing all documents, the approver enters comments and chooses either **Send Back – Revision Required** or **Approve**.

If the approver selects **Send Back – Revision Required**, the system updates the Design Status to **Revision Required**, records the approver's comments and sends the Design Package back to the Design Engineer for modification.

If the approver selects **Approve**, the system updates the Design Status to **Approved**, marks the Design Completion as **100%**, records the approval details and enables the **List of Items** section.

Step 9: User clicks **Click to Upload** in the **List of Items** section. System opens the **Bulk Upload Item List** modal. User downloads the standard template if required, uploads the completed Excel Item List and clicks **Upload**. System validates the uploaded Excel file and displays the uploaded records in the Preview Grid. User reviews the preview and clicks **Save**. System saves the uploaded item list and displays the message "**Item list uploaded successfully.**"

Step 10: System displays the uploaded Item List file in the **List of Items** grid.

3-dot Actions: View / Download / Delete (*Delete is available only before submission to SCM.*)

System performs the selected action based on the user's choice.

Step 11: User clicks **Submit to SCM**. System validates that the Design Package has been approved and the Item List has been uploaded successfully. System submits the approved Design Package and Item List to the SCM/BOQ module, updates the Design Status to **Submitted to SCM**, records the activity in the audit log and displays the confirmation message "**Design Package submitted to SCM successfully.**"
